

The background features abstract green geometric shapes. On the left, a solid green trapezoid points upwards. On the right, a complex arrangement of overlapping translucent green triangles and polygons creates a dynamic, layered effect. The text is centered on a white background between these two green elements.

Java Features

Mr. Pankaj Jagasia

Java 5 Features (Tiger)

- ▶ Accessing static methods and variables using *Static import*
- ▶ Method Over-riding additional Support
 - ▶ @Override annotation
 - ▶ Covariant returns (allows you to use a subclass return type while overriding)
- ▶ Method overloading issues
 - ▶ Auto boxing & unboxing
 - ▶ Var-arg parameter method
- ▶ Collection programming enhancement
 - ▶ For-each loop / enhanced for loops
 - ▶ Generics (Typed Parameter, Type Safety)

- New Style Class
 - Enum
 - Annotations
- C Languages style enhancement
 - C style formatting I/P and O/p
 - Scanner class
- Collection Enhancement
 - Queue type Collections
 - Java.lang.concurrent package

Java 6 (Mustang)

- ▶ Primarily to Improve Performance and to overcome the lags in Java 5
- ▶ Classes introduced
 - ▶ Console
 - ▶ NavigableSet
 - ▶ NavigableMap

Java 7 Features (Dolphin)

- ▶ Execution flow change with respect to main method.
 - ▶ Upto Java 7 if no main method is there start execution using Static block. Prior to Java 7 static variables initialized then static block fired and then check for the main method. In Java 7 first check if main method is present or not if not raise an exception, else continue with the static variables, static block, and then main.
- ▶ Underscore in number literal is allowed for eg `int tmp = 1_00_000;`
- ▶ Switch allows String
- ▶ Try with resources
- ▶ Catch with multiple exceptions
- ▶ Bug fixing for var-arg in overloading
- ▶ Auto Boxing casting improved (direct assignment without having to cast in Wrapper type)
- ▶ Generic type inference (`ArrayList<String> list = new ArrayList<>();`)

Java 8 Features (No codenames from this version)

- ▶ Interface issues resolution
 - ▶ Default method support in Interface
 - ▶ Static method in interfaces
- ▶ Functional Programming
 - ▶ Functional interface
 - ▶ @FunctionalInterface
 - ▶ Lambda expressions
 - ▶ Method & Constructor Reference (::)
- ▶ Stream API (bulk operations on Collection)
 - ▶ forEach() & spliterator() method in Iterable interface
 - ▶ Stream API (java.util.stream) [filtering, mapping]
 - ▶ Functional API (java.util.function)

▶ Predicate	BiPredicate
▶ Function	BiFunction
▶ Consumer	BiConsumer
▶ Supplier	-
▶ UnaryOperator	BinaryOperator
- New Date & Time API solves issues of thread safety (in association with joda.org)
- Multicore processing
 - Base64 API
- Security API
- Annotation Enhancement
 - RepeatedAnnotation
 - TypeAnnotation
 - PluggableAnnotation
- Improvement done in HashMap (Key collision implemented using BinaryTree)
- Removal of jdbc:odbc bridge
- Adding JavaScript support using Nashorn JavaScript Engine

Ideology behind Java 8

- ▶ Simplify Programming
- ▶ Utilizing the benefits of Functional Programming
- ▶ To utilize the capabilities of Multi-core-processors, and enable parallel processing using Streams

Java 9 features

- ▶ **Java 9 REPL - Read Evaluate Print Loop (JShell)** (It is used to execute and test any Java Constructs like class, interface, enum, object, statements etc.)
- ▶ **Factory Methods for Immutable List, Set, Map and Map.Entry**
- ▶ **Private methods in Interfaces**
- ▶ **Java 9 Module System**
- ▶ **Process API Improvements** (`java.lang.ProcessHandle` & `java.lang.ProcessHandle.Info`) allows to manage and control OS processes
- ▶ **Try With Resources Improvement**
- ▶ **CompletableFuture API Improvements**
- ▶ **Reactive Streams** (used for Publish/Subscribe framework)
- ▶ **Diamond Operator for Anonymous Inner Class** (`return new List(emp){ }`)
- ▶ **Optional Class Improvements**
- ▶ **Stream API Improvements**
- ▶ **Enhanced @Deprecated annotation**
- ▶ **HTTP 2 Client**
- ▶ **Multi-Resolution Image API**

Java 10 features

- ▶ **Time-Based Release Versioning**
- ▶ **Local-Variable Type Inference** (`var numbers = List.of(1, 2, 3, 4, 5)`)
- ▶ **Experimental Java-Based JIT Compiler** (Dynamic change of JIT)
- ▶ **Application Class-Data Sharing** (reduces boot time for independent apps)
- ▶ **Parallel Full GC for G1** (performance improvement by using parallel invocation)
- ▶ **Garbage-Collector Interface** (for future enhancements of GC)
- ▶ **Additional Unicode Language-Tag Extensions** (cu for currency, fw first day of week, rg region override, tz timezone)
- ▶ **Root Certificates**
- ▶ **Thread-Local Handshakes** (Internal enhancement to improve JVM performance)
- ▶ **Heap Allocation on Alternative Memory Devices**

Java 11 features

- ▶ Running Java File with single command
- ▶ Java String Methods Enhanced
- ▶ Local-Variable Syntax for Lambda Parameters (`var x, var y`)-> `x + y`;
- ▶ Nested Based Access Control (Reflection issues resolved to access private members of enclosing class from inner class)
- ▶ Remove the Java EE and CORBA Modules
- ▶ Flight Recorder
- ▶ HTTP Client (Improvements)
- ▶ Reading/Writing Strings to and from the Files (`Files.readString(path);`)

Java 12 features

- ▶ Switch expressions (`switch(name){case CDAC,PUNE->4;case MUMBAI->6;}`)
- ▶ `File.mismatch` method
- ▶ Compact Number Formatting (eg, 2952 will be shown as 2.6k)
- ▶ Java Strings New Methods
- ▶ Other improvements for Performance
